

Trinity Animation has been providing high quality images and animations for over 15 years. We can not only match photographic services by creating photo real renderings, but we can surpass them with the possibilities allowed by completely virtual imaging. Once your product or design is 3D modeled, we can demonstrate its function with animations or visualize materials options in a snap. We can zoom into detailed areas and provide crisp views of the most intricate parts. We can even show exploded views or line art to display the technical aspects of your products. Call or email us at your convenience to discuss your next project.

Creating 3D Imagery...

3D Rendering

Photograph

The figure above illustrates an exercise in recreating a photograph as a rendering. As this demonstrates, our process is accurate and photo real. Trinity offers a great alternative to the transportation, set building and other costly requirements for photography. These virtual 3D sets provide our clients with almost unlimited flexibility.

is what we do. Some call it virtual photography or photo simulations. We call it art. We offer the finest production services in photorealistic 3D architectural rendering, animation, industrial design and visualization. We service companies worldwide with top quality workmanship and second-to-none customer service. Our animators are highly skilled professionals with industry experience. We strive to offer you the best possible service that is timely and cost effective, that achieves your project's needs.

Rendering images allows the flexibility to display your products in any environment without the cost of renting space or physically setting up a stage and lighting. Since our props are digital, you can browse our vast stock model library online at your leisure, and add as many as you like for almost no additional cost. Or, we can build any custom props that you need to place your product in the best setting you can imagine.

Trinity Animation has been creating high quality imagery for their clients for over 15 years. With a breadth of experience -- producing everything from demonstrative animations explaining function, to Quicktime VR interactive visualizations, to beauty shots of every type of product -- we can offer fresh ideas on how to best feature your products.

Benefits of 3D Renderings

- Completed projects can be restored and modified at any time.
- Images can show products which don't exist yet in an environment of your choice.
- Royalty-free imagery that can be used for posters, brochures, web sites, video presentations and other image and movie formats.
- We can provide Photoshop™ masks, layers and cutout detail shots with ease.
- Images can be crisp and clear at any size.
- The ability to render at high settings allows you to zoom in on images to show details.
- We can provide interim draft images for review during the production process for easy project direction.
- The biggest part of the project is usually scene construction and lighting. Once this work is done, material variations and alternate views can be provided at little additional cost.

**“The renderings are so real,
our printer couldn't tell the difference.”**

- Dawn Boileau : Hi5 Furniture

“Trinity's artists have a strong understanding of furniture, materials, and environments. Lighting accents, perceptive camera angles, and color matching are their standards. As a result, Trinity's images are more realistic and impressive than actual photography.”

- Jillian Pai : Iconic Revolution Inc.
